The Summit Ascent is everything you want from a modern sporting clays shotgun without the additional cost of an adjustable point-of-impact rib. The 10mm high tapered top rib is designed to shoot at 50/50% point-of-impact allowing for an upright shooting position and improved target visibility, making it the perfect Sporting Clays gun. The stock incorporates the DTS adjustable comb to make sure a variety of shooters can adjust the gun to fit precisely. The mass in the stock and barrels are engineered so the gun will balance perfectly. With a long list of winning features the Ascent is taking sporting clays to the next level.

Introducing the Caesar Guerini SUMMIT ASCENT

GUERINI**

CAESAR GUERINI SUMMIT ASCENT...

THE VIEW IS BETTER FROM THE SUMMIT

All Caesar Guerini shotguns, including the light models, undergo the 1320-bar high-pressure test at the Italian National Proof House.

Caesar Guerini shotguns are backed by a lifetime warranty and the acclaimed Pit Stop service program.

The multi-axis DTS comb allows for the adjustment of: offset, cast, comb height, and comb drop. But adjustability is not helpful unless the system is rugged. The DTS comb hardware is light but extremely simple and strong; designed to stay exactly where you set it.

Optional "No Impact" soft comb available.

Optional DTS Kinetic Balancer system with multiple weights and micro adjustment. The system also includes kinetic recoil reduction and does not need to be removed to access the stock bolt when removing your stock.

Left hand and custom stock dimensions are available.

Selective and non-selective triggers are available.

5" long dual conical forcing cones for reduced recoil and improved patterns.

10mm tall rib allows for a more upright and comfortable shooting position while improving visibility.

Interchangeable trunnions and locking lug.

Interchangeable fore-end inserts allows the action to be tightened.

Optional factory selective release triggers available in single and double release.

A special "Skeet" trigger is available as an option.

New DTS trigger system with two trigger pull weight options, take up, over travel, and length of pull adjustments.

10-8mm tapered rib is regulated at 50/50 point-of-impact.

The optional DTS barrel weights allow the shooter to fine tune the way the gun handles

Trim rounded fore-end for instinctive pointing

.735" Maxis oversized bore with chrome lining for optimal ballistic performance.

100 % of our barrels are tested and certified for correct point-of-impact regulation.

Maxis choke system with conical-parallel design and crowned exit radius for maximum pattern performance. A friction wrench with thread cleaner is supplied.
